Scientific Name: Acer negundo **Variety:**
Cultivar: Variegatum **Family:** Aceraceae **Tsnum:** 95034
Common Name: Variegated Boxelder
Source: J. Frank Schmidt and Son Co **Quantity observed:** 2 **PI #:**

Observation Date of Plant: 8/7/2013

Plant Habit: Upright to round, irregular

Plant Height: 10-15 ft.

Plant Width: 12-18 ft

Current Seasons Growth: 6-12 in.

Foliage Color: Variegated, light green and white

Bark Characteristics: Unimportant

Plant Summer Texture: Medium

Aesthetic Plant Quality: Fair

Landscape Uses: Specimen, small/confined areas

Overall Plant Health: Fair

Fruit Present: Abundant

Fruit Color: Green

Insect Pests: Leaf hopper

Pest Severity: Minor injury

Plant Disease: Canker

Disease Severity: Old canker caused damage on 20-30% of canopy - one tree is worse than the oth

Cultural Problems:

Nuisances:

Recommended: Marginal

Comments on plant: Has minor suckering. Would benefit from regular pruning since it has a lot of little dead twigs from low vigor. May need more irrigation. About 20% of canopy reverting back to solid green.

Cultivar: -0- *Family:* Rosaceae *Tsnum:* 85159
Common Name: Purple-fruited Chokeberry
Source: Timber Creek Nursery *Quantity observed:* 3 *PI #:* -0-

Observation Date of Plant: 10/6/2013

Plant Habit: Broad oval

Plant Height: 7-10 ft

Plant Width: 15-20 ft.

Current Seasons Growth: 1-3 in.

Foliage Color: Medium green

Bark Characteristics: Unimportant

Plant Summer Texture: Medium

Aesthetic Plant Quality: Fair to poor

Landscape Uses: Wildlife, specimen, shrub border

Overall Plant Health: Fair to poor

Fruit Present: Few fruit

Fruit Color: Black

Insect Pests:

Pest Severity:

Plant Disease: Canker

Disease Severity: 70% of canopy removed in 2013

Cultural Problems:

Nuisances:

Recommended: No

Comments on plant: All are moderately chlorotic with low vigor. One of three had 70-85% of canopy dieback. Second plant had 50% dieback but third looks fairly normal. Most of dieback occurred around 2011 and seems to have stopped although vigor is still

Scientific Name: Betula lenta **Variety:** -0-
Cultivar: -0- **Family:** Betulaceae **Tsnum:** 89165
Common Name: Sweet Birch
Source: Schichtel's Nursery **Quantity observed:** 1 **PI #:** -0-

Observation Date of Plant: 9/26/2013
Plant Habit: Round becoming broad oval
Plant Height: 7-10 ft.
Plant Width: 10-12 ft.
Current Seasons Growth: 6-10 in.

Foliage Color: Medium green
Bark Characteristics: Intermediate importance
Plant Summer Texture: Medium
Aesthetic Plant Quality: Poor
Landscape Uses: Specimen, wet areas

Overall Plant Health: Fair to poor

Fruit Present: None

Fruit Color:

Insect Pests:

Pest Severity:

Plant Disease: Canker

Disease Severity: Severe injury

Cultural Problems:

Nuisances:

Recommended: No

Comments on plant: Keeps dying back from top down due to cankers. Fruiting bodies forming along stems.

2014 Woody Plant Evaluations
at the Plant Environmental Research Center, Colorado State University, Fort Collins, CO

Scientific Name: Betula papyrifera **Variety:**
Cultivar: Varen **Family:** Betulaceae **Tsnum:** 03020
Common Name: Paper Birch
Source: USDA/NC-7, Ames, IA **Quantity observed:** 2 **PI #:** 26922

Observation Date of Plant: 9/27/2013

Plant Habit: Upright oval

Plant Height: 15-20 ft.

Plant Width: 8-12 ft.

Current Seasons Growth: 18-24 in.

Foliage Color: Medium green

Bark Characteristics: Important

Plant Summer Texture: Medium

Aesthetic Plant Quality: Good

Landscape Uses: Specimen, large shade tree, moist areas

Overall Plant Health: Good

Fruit Present: Few fruit

Fruit Color: Green turning to tan

Insect Pests:

Pest Severity:

Plant Disease:

Disease Severity:

Cultural Problems:

Nuisances:

Recommended: Yes

Comments on plant: Planted in arboretum in 2004. Possible signs of borer holes near base.

Observation Date of Flowers:

Flower Color:

Flower Type:

Flower Effect:

% of Flower Coverage:

Bloom Stage:

Comments on Flowers:

Fall Color or Fruit: Fall color

Aesthetics: Good

Fall Color: golden yellow

Date of observation: 10/6/2008

Persistence: 1-2 weeks

2014 Woody Plant Evaluations
at the Plant Environmental Research Center, Colorado State University, Fort Collins, CO

Scientific Name: Betula pendula **Variety:**
Cultivar: **Family:** Betulaceae **Tsnum:** 97078
Common Name: European White Birch
Source: USDA/NC-7, Ames, IA **Quantity observed:** 1 **PI #:** Ames 23249

Observation Date of Plant: 9/27/2013
Plant Habit: Upright oval to pyramidal
Plant Height: 18-22 ft.
Plant Width: 12-18 ft
Current Seasons Growth: 6-12 in.

Foliage Color: Dark green
Bark Characteristics: Important
Plant Summer Texture: Medium
Aesthetic Plant Quality: Fair to poor
Landscape Uses: Residential street, specimen, moist areas

Overall Plant Health: Fair to poor

Fruit Present: Unimportant

Fruit Color:

Insect Pests:

Pest Severity:

Plant Disease:

Disease Severity:

Cultural Problems:

Nuisances:

Recommended: Marginal

Comments on plant: 25-30% of canopy has died back and was pruned out. Hard to confirm on this tree but birches usually have problems with dry winters and then borers move in.

Observation Date of Flowers:

Flower Color:

Flower Type:

Flower Effect:

% of Flower Coverage:

Bloom Stage:

Comments on Flowers:

Fall Color or Fruit: Fall color

Aesthetics: Good

Fall Color:

2014 Woody Plant Evaluations
at the Plant Environmental Research Center, Colorado State University, Fort Collins, CO

Scientific Name: Betula x
Cultivar: Crimson Frost **Family:** Betulaceae **Variety:**
Common Name: Crimson Frost Birch **Tsnum:** 96133
Source: Schichtel's Nursery **Quantity observed:** 1 **PI #:**

Observation Date of Plant: 10/2/2014

Plant Habit: Weeping

Plant Height: 25-30 ft.

Plant Width: 12-17 ft.

Current Seasons Growth: 8-15 in.

Foliage Color: Dark purple

Bark Characteristics: Important

Plant Summer Texture: Medium

Aesthetic Plant Quality: Good

Landscape Uses: Specimen, large shade tree

Overall Plant Health: good

Fruit Present: None

Fruit Color:

Insect Pests: borers

Pest Severity: Minor injury

Plant Disease:

Disease Severity:

Cultural Problems:

Nuisances:

Recommended: Yes

Comments on plant: Lost two other trees in areas not as moist as the perennial garden, which gets more irrigation during the winter. Borers will kill it off if not kept moist and stress-free.

at the Plant Environmental Research Center, Colorado State University, Fort Collins, CO

Scientific Name: Carpinus betulus **Variety:**
Cultivar: JFS-KW1 CB **Family:** Betulaceae **Tsnum:** 10017
Common Name: Emerald Avenue Hornbeam
Source: J. Frank Schmidt and Son Co **Quantity observed:** 2 **PI #:**

Observation Date of Plant: 9/26/2013

Plant Habit: Narrow, columnar

Plant Height: 8-12 ft.

Plant Width: 2-3 ft.

Current Seasons Growth: 10-15 in.

Foliage Color: Dark green

Bark Characteristics: Unimportant

Plant Summer Texture: Medium

Aesthetic Plant Quality: Good

Landscape Uses: Specimen, narrow areas

Overall Plant Health: Good

Fruit Present: None

Fruit Color:

Insect Pests:

Pest Severity:

Plant Disease: Canker on trunk of one tree about six inches above soil.

Disease Severity: Slight to moderate

Cultural Problems:

Nuisances:

Recommended: Yes

Comments on plant: Planted in 2011. Looks good despite canker.

at the Plant Environmental Research Center, Colorado State University, Fort Collins, CO

Scientific Name: Carpinus betulus **Variety:**
Cultivar: Pendula **Family:** Betulaceae **Tsnum:** 03003
Common Name: Weeping European Hornbeam
Source: Carlton Plants **Quantity observed:** 2 **PI #:**

Observation Date of Plant: 9/26/2013

Plant Habit: Round, weeping

Plant Height: 7-9 ft.

Plant Width: 8-10 ft.

Current Seasons Growth: 10-15 in.

Foliage Color: Dark green

Bark Characteristics: Not very important

Plant Summer Texture: Medium

Aesthetic Plant Quality: Fair to good

Landscape Uses: Specimen, small/confined areas

Overall Plant Health: Fair to good

Fruit Present: None

Fruit Color:

Insect Pests:

Pest Severity:

Plant Disease:

Disease Severity:

Cultural Problems:

Nuisances: Slight suckering

Recommended: Marginal

Comments on plant: Canopy died back 50% during first winter - temperature reached -16F. No significant dieback since then. Doesn't seem to be weeping much. One of two trees dropped half its leaves early and upper trunk is discolored.

Scientific Name: Forsythia viridissima **Variety:**
Cultivar: Klein **Family:** Olacaceae **Tsnum:** 02015
Common Name: Klein Dwarf Forsythia
Source: Sjulín Nurseries **Quantity observed:** 3 **PI #:**

Observation Date of Plant: 10/6/2013

Plant Habit: Irregular

Plant Height: 4-6 ft

Plant Width: 6-8 ft.

Current Seasons Growth: 1-2 ft.

Foliage Color: Dark green

Bark Characteristics: Unimportant

Plant Summer Texture: Medium

Aesthetic Plant Quality: Fair to good

Landscape Uses: Specimen, shrub border

Overall Plant Health: Good

Fruit Present: None

Fruit Color:

Insect Pests:

Pest Severity:

Plant Disease:

Disease Severity:

Cultural Problems:

Nuisances:

Recommended: Yes

Comments on plant: Growth habit is somewhat more attractive than most Forsythias - less leggy with smaller foliage size.

Observation Date of Flowers: 3/20/2012

Flower Color: yellow

Flower Type: Cluster

Flower Effect: Poor to fair

% of Flower Coverage: 30-40%

Bloom Stage: Flowers open

Comments on Flowers: Never has had many flowers. Only one of three plants has flowers.

2014 Woody Plant Evaluations
at the Plant Environmental Research Center, Colorado State University, Fort Collins, CO

Scientific Name: Fraxinus americana *Variety:* -0-
Cultivar: Autumn Applause *Family:* Oleaceae *Tsnum:* 91070
Common Name: Autumn Applause White Ash
Source: A. McGill & Son Nursery *Quantity observed:* 1 *PI #:* -0-

Observation Date of Plant: 8/7/2013
Plant Habit: Upright oval becoming round
Plant Height: 15-20 ft.
Plant Width: 15 -20 ft.
Current Seasons Growth: 6 - 12 in.

Foliage Color: Medium green
Bark Characteristics: Intermediate importance
Plant Summer Texture: Medium
Aesthetic Plant Quality: Good to fair
Landscape Uses: Residential street, specimen, large shade tree

Overall Plant Health: Good
Fruit Present: None
Fruit Color:
Insect Pests: Borers
Pest Severity: Slight injury
Plant Disease: Canker
Disease Severity: Moderate injury
Cultural Problems:
Nuisances:

Recommended: Marginal
Comments on plant: Moved in 2003 due to unavoidable construction. Canopy looks fine but canker wounds on upper main trunk killed central leader. Lower laterals are taking over - growth habit is skewed. Still looks okay generally.

Scientific Name: Juniperus sabina **Variety:** -0-
Cultivar: Tamariscifolia New Blue **Family:** Cupressaceae **Tsnum:** 93104
Common Name: New Blue Tammy Juniper
Source: Zelenka Nursery **Quantity observed:** 2 **PI #:** -0-

Observation Date of Plant: 11/6/2014

Plant Habit: Spreading

Plant Height: 2 - 4 ft.

Plant Width: 8-12 ft.

Current Seasons Growth: 6-12 in.

Foliage Color: Blue/green

Bark Characteristics: Unimportant

Plant Summer Texture: Fine

Aesthetic Plant Quality: Good

Landscape Uses: Ground cover, Xeriscape, Shrub border

Overall Plant Health: Good

Fruit Present: None

Fruit Color:

Insect Pests:

Pest Severity:

Plant Disease:

Disease Severity:

Cultural Problems: Getting crowded by nearby plants.

Nuisances:

Recommended: Yes

Comments on plant: Both plants getting crowded by neighboring plants and one is almost swallowed up. New growth appears to have a shade of blue more than the older mature foliage.

Insect Pests: Leaf miner

Pest Severity: Slight injury

Plant Disease: Wet wood on one of two trees

Disease Severity: Minor injury

Cultural Problems: Possible restrictive root on one side of larger tree

Nuisances:

Recommended: Yes

Comments on plant: Branching habit is fairly open on larger tree. Second tree has much less vigor but still looks good.
