Foreword

The Colorado Seed Growers Association (CSGA) is a non-profit educational and service organization, affiliated with Extension of Colorado State University and authorized by the Colorado State Legislature as the official seed certifying agency in Colorado. Growers listed in this directory are members of the CSGA, producing certified seed in accordance with the rules and regulations of the Association. CSGA is a member of the Association of Official Seed Certifying Agencies (AOSCA). AOSCA is an organization composed of agencies responsible for seed certification in the United States, Canada, Argentina, Australia, Chile, New Zealand, Panama and South Africa. The following listings include fields eligible for certification in 2026. Each seed producer is responsible for maintaining the integrity of the certifiable seed listed herein. Final certification and the right to represent the seed as certified is dependent upon the results of field inspection, proper seed conditioning and laboratory analysis.

Growers warrant that seed sold by them conforms to the standards of the CSGA and to applicable state and federal seed laws. Certified seed may be sold bagged or in bulk. Bagged seed must be packaged in new containers and have an official certified tag or label attached to each bag. Each sale of certified seed in bulk must be accompanied by a bulk sales certificate completed and signed by the producer.

Colorado Seed Law requires that each container be labeled as to its origin, the germination percentage and date tested, percent by weight pure seed, other crop seed, weed seed and inert matter. In addition, the label must contain a lot number or lot identification, along with the name and address of the person who labeled or sold the seed.

The CSGA assumes no financial responsibility for seed listed in this directory or for disagreements over sales which may arise from this list. However, any complaints or irregularities should be reported to the CSGA office.

Wheat Stem Sawfly Tolerant Wheats

The wheat stem sawfly (WSS) is a native grass insect that has emerged as a significant threat to winter wheat in Colorado. Female sawflies lay eggs when they emerge in the spring, inserting eggs into the first available internode. Larvae develop and move down the stem, feeding as they go. Feeding injury weakens the wheat stems, and cutting at the base of the stem by the larvae just prior to harvest causes lodging. Wheat breeding programs are aimed at finding varieties that can tolerate sawfly damage and continue to stand up while sustaining some level of damage from larval feeding.

Several wheat varieties are now available with tolerance to wheat stem sawfly. These varieties contain a gene called 'Sst1' that confers stem solidness of varying degrees depending on the variety. The solid stem characteristic has been shown to be effective in reducing damage caused by wheat stem sawfly.

Several wheat breeding programs around the region are incorporating the solid stem trait into their varieties, include CSU, Syngenta, and WestBred. The wheat breeding program at Colorado State University is initiating long term research into novel methods for making the wheat plant less attractive to the sawfly. CSU entomologists are also researching the presence and effectiveness of natural enemies to supplement solid stem wheat breeding tactics for sawfly management.

Fact Sheet:

Wheat Stem Sawfly: A New Pest of Colorado
Wheat - 5.612 - Extension (colostate.edu)

Foundation Seed

Foundation seed of public varieties is produced by CSU Agronomy Foundation Seed, Department of Soil and Crop Sciences, Colorado State University.

Foundation seed of the following varieties is available for planting in the Fall of 2026. Foundation Seed orders will be accepted until August 17, 2026, after which the seed will be allocated. Individual orders should be placed with Tyler Benninghoven with Colorado Wheat. Please call Tyler at 970-702-1460 (cell) or 970-449-6994 (office). You may also email Tyler at tbenninghoven@coloradowheat.org.

CSU Agronomy Foundation Seed is located at the Ag Research Development and Education Center (ARDEC) on the east frontage road along I-25 north of Fort Collins; shipping can be handled with prior arrangements. Any seed ordered but not paid for or picked up by September 7, 2026 will be released to other growers.

Foundation seed will be treated and packaged in 2,000 lb totes!

Seed Arbitration

The Colorado Seed Law mandates for the arbitration of disputes between seed buyer and seller. The law states that all seed sold shall be tagged with a notice of the required arbitration.

If the seed buyer believes that the seed did not perform as warranted, a claim may be filed with the Colorado Commissioner of Agriculture. The law provides for a board who will hear testimony, review evidence and decide the validity of the claim. Findings of the board are not binding but may be used as evidence in any civil suit.

Further information on arbitration or assistance in filing for arbitration should be directed to the Colorado Department of Agriculture at 303-869-9070.

NOTICE: Listings are based on acres applied for. Eligibility for certification will depend on satisfactory field and seed inspections.

Seed Classes

Seed certification relies on a generation sequence of seed increase from the original Breeder seed through two or three subsequent generations. The number of generations beyond Breeder seed is determined by the originator at the time a variety is formally released. These generations are often identified as classes, and each class is produced and handled to maintain genetic purity. The primary advantage is that seed sold to a farmer is never more than a limited number of multiplications from that produced under the breeder's control. The limited generation system, when coupled with strict production and seed standards, assures genetically pure high-quality seed.

Breeder - Breeder seed shall be that seed or vegetative propagating material directly controlled by the originating or sponsoring plant breeder, institution, or firm which provides the source for the initial and recurring increase of Foundation seed. (B)

Foundation - Foundation seed is produced from Breeder seed and maintained by state agricultural experiment stations or private companies. Foundation seed is the source of Registered and/or Certified seed. (F)

Registered - Registered seed is the progeny of Foundation seed. Registered seed, when a Registered class is designated, is the parent stock for the production of Certified seed. (R)

Certified - Certified seed is the progeny of Foundation or Registered seed. Certified seed is the planting stock recommended for commercial production. (C)

Plant Variety Protection Act and Federal Seed Law, Title V

The Plant Variety Protection ACT (PVPA) was signed into law on December 24, 1970. The PVPA's objective is to encourage the development of novel varieties of sexually-reproduced plants and make them available to the public, providing protection to those who breed, develop, or discover them, and thereby promoting agricultural progress in the public interest. The U.S. Dept. of Agriculture is responsible for administering the Act.

A Certificate of Protection is valid 20 years from date of issuance in most cases. The owner has the right to exclude others from selling, offering for sale, reproducing, importing, or exporting the variety during this time. The owner is responsible for enforcing these rights.

Two options for plant variety protection are available to the developer of the variety. The first option enables the developer to sell or authorize for sale either certified or uncertified seed of the variety. The second option is the "certification only" option which utilizes provisions of Title V of the Federal Seed Act. A variety protected in this manner may be sold by variety name only as a class of certified seed. Sale of non-certified seed by variety name is in violation of both the certificate owner's rights and federal and state seed laws. Seed may be called "Certified" only after meeting all requirements and standards of a member of the Association of Official Seed Certifying Agencies (AOSCA). Violators of Title V may be prosecuted by the federal or state government. Most newly released varieties are protected under the "certification only" option. Contact CSGA with questions regarding PVP status of varieties.

Utility Patents

Utility patents are another means of protection for developers of new plant varieties. The CLEARFIELD and COAXIUM wheat technologies are protected under U.S. Patent law and can be used by farmers only if they sign an appropriate Stewardship Agreement for the year in which they will grow CLEARFIELD or COAXIUM wheat. The agreement requires that the farmer, among other things, use CLEARFIELD or COAXIUM wheat solely for planting a single commercial crop.

Questions and Answers on Plant Variety Protection

Q: What are the benefits of PVP for farmers?

A: The Plant Variety Protection Act was designed to promote the development of new plant varieties. It allows the breeder to recoup some of the development costs, often through royalties, to reinvest in future variety development programs.

Q: What does PVPA Title V protection mean?

A: The variety can only be SOLD as a class of certified seed. Sales of non-certified seed of these varieties is illegal.

Q: Can a farmer save seed of a protected variety?

A: For varieties protected under 1994 PVPA, yes. A farmer can save seed to plant on his own holdings (land owned, leased, or rented). For varieties protected by CLEARFIELD or COAXIUM Utility Patent, no. New certified seed must be purchased each year.

Q: Can a farmer sell seed of a protected variety?

A: For varieties protected under 1994 PVPA or Utility Patent, no, unless permission is given by the variety owner. Contact CSGA if you do not know what protection a variety is covered by.

Q: In an effort to get around the law, can a farmer advertise farmer-saved seed of a protected variety as “Variety Not Stated” (VNS)?

A: No, selling a protected variety as VNS is a violation of the law.

Q: Can I condition/clean seed for a farmer?

A: Yes, but any actions taken as a step in marketing farmer-saved seed infringes upon the rights of the variety owner. Under the 1994 PVPA, cleaning or storing farmer-saved seed for sale are infringements. Anyone who cleans or conditions farmer-saved seed should keep written documentation from the farmer stating that the seed being cleaned is not in violation of PVP laws or patents.

HARD RED WINTER WHEAT

AMPLIFY SF HARD RED WINTER WHEAT -

Released in the fall of 2021, Amplify SF is an HRW variety improving the options to combat the wheat stem sawfly specific to the high plains. This variety provides an improved pith rating of 17, enhancing yield performance with superior larval cutting resistance. It's maturity fits the high plains environment, along with resilient test weight when faced with drought conditions during grain fill. Control volunteer wheat before planting, Amplify SF does not carry the wsm2 or curl mite gene for WSMV resistance. Amplify SF should be on your short list of tools to keep wheat viable on the farm. Planting Semi-solid varieties should always be a part of a diversified approach to managing sawfly on your farm. **PVP protected, SINGLE SEASON USE, no saved seed allowed until June 30th, 2026. (Sunset Date)**

AP BIGFOOT HARD RED WINTER WHEAT -

AP Bigfoot is a hard red winter wheat developed by Syngenta Crop Protection AG. AP Bigfoot was selected for height, maturity and green leaf duration. Selection in future generations was based on yield, disease, and quality. The area of adaptation includes Central, Southern, and Western Plains. No claims are made regarding pest resistance. Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only As A Class Of Certified Seed - U.S. Protected Variety - 1994 PVPA.

AP ROADRUNNER HARD RED WINTER WHEAT -

AP RoadRunner is a hard red winter wheat developed by Syngenta Crop Protection AG. AP RoadRunner was selected for height, maturity, green leaf duration, disease reaction, and end use quality. AP RoadRunner is a well-adapted bread wheat to the irrigated and dryland production areas of the Central Dryland and Western Dry and Irrigated High Plains. AP RoadRunner is moderately resistant to common races in the Central Plains of leaf rust and moderately susceptible to common races of stripe rust in the Central Plains. Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only As A Class Of Certified Seed - U.S. Protected Variety - 1994 PVPA.

AP SUNBIRD HARD RED WINTER WHEAT -

AP Sunbird is an early maturing hard red winter wheat variety with outstanding grain yield potential in the western plains and under irrigation. Grain quality is excellent for milling and baking. Use a fungicide at flag leaf to manage stripe rust. Best-in-class tolerance to wheat streak mosaic virus but remain diligent in controlling volunteer wheat. A growth regulator may be warranted to minimize the risk of lodging where yield goals exceed 85 bushels per acre. (cont.)

AP SUNBIRD HARD RED WINTER WHEAT (cont.)-
Exceptional performance in forage and silage trials. AP Sunbird is an AgriPro Brand wheat variety released by Syngenta. Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only As A Class Of Certified Seed - U.S. Variety Protection Applied For - 1994 PVPA.

AP24 AX HARD RED WINTER WHEAT -
AP24 AX is a hard red winter wheat developed by Colorado State University, exclusively licensed to Syngenta/AgriPro for marketing in the U.S. AP24 AX is a CoAXium® wheat with improved tolerance to Aggressor AX herbicides for control of winter annual grasses. Agronomic and disease tolerances are similar to AP18 AX. A close comparison will show AP24 AX to be slightly later in maturity and slightly taller in height, but still well within a medium classification for both. Use caution on low pH soils that may have toxic levels of plant-available aluminum. Aluminum toxicity can often be overcome by applying a phosphorus starter fertilizer. **Like all CoAXium wheats, producers are prohibited from saving seed and a stewardship agreement must be signed prior to purchase. PVP protected; to be sold by variety name only as a class of certified seed.**

**BRAWL CL PLUS HARD RED WINTER
WHEAT -**

Released in 2011, Brawl CL Plus is a two-gene Clearfield® variety that has shown stable performance over a wide geography for several years. Two genes for tolerance to Beyond® herbicide allows growers to add methylated seed oil to the tank mix to increase effectiveness of the herbicide, especially on jointed goatgrass. Brawl CL Plus has demonstrated very good ability to maintain higher grain protein with increasing yield levels. **PVP protected; SINGLE SEASON USE, no saved seed allowed. Stewardship Agreement Required.**

BROAD AX HARD RED WINTER WHEAT-

Released in 2025, Broad AX is a new CoAXium semi solid stem variety best adapted to the northern central plains to central and eastern Montana. It’s stem solidness ranges from 13-16, expressing more pith as you move north in latitude. Maturity is medium late, with good stripe rust tolerance, triticum mosaic virus resistance, average test weight and good protein. Plant in areas of mild to moderate sawfly pressure where grassy weed control is also necessary. **PVP protected; SINGLE SEASON USE, no saved seed allowed. Stewardship Agreement Required.**

BYRD CL PLUS HARD RED WINTER WHEAT-

Released in 2018, Byrd CL Plus is a two-gene Clearfield® version of Byrd. It includes the same agronomic benefits you’ve come to expect from Byrd, including drought stress tolerance and yield response to moisture. It is slightly taller than Byrd, with better straw strength. **PVP protected; SINGLE SEASON USE, no saved seed allowed. Stewardship Agreement Required.**

CANVAS HARD RED WINTER WHEAT -

Released in 2018, Canvas has proven to be the most widely adapted variety in our portfolio, and a great performer under stress and in high moisture environments. Its straw strength and upright structure allow for higher populations with intensive management, without risking the frustration of falling over. Its disease resistance protects you from yield robbing fungal diseases and mite transmitted viruses, and its grain quality places it on many grain buyer preferred lists. Canvas is widely adapted, performing well in Oklahoma, Texas, New Mexico, Kansas, Colorado, and the panhandle of Nebraska. **PVP Protected; to be sold by variety name only as a class of certified seed.**

CRESCENT AX HARD RED WINTER WHEAT

Released in 2018, Crescent AX is an excellent CoAXium variety proven to compete with many leading central and high plains HRW varieties from Oklahoma to South Dakota. Crescent AX is broadly adapted, providing excellent yield performance on difficult to manage acres. Crescent AX has early maturity, a larger kernel, very good test weight, wheat curl mite resistance, and very good end-use quality. Best suited to be planted later in the fall (perhaps behind cotton in the south, or later maturing corn moving north). If you plan to graze, be mindful of first hollow stem and remove cows accordingly. **PVP protected; SINGLE SEASON USE, no saved seed allowed. Stewardship Agreement Required.**

The Colorado Seed Industry Association Wants YOU!

The Colorado Seed Industry Association (CSIA) is an organization dedicated to the enhancement and support of Colorado seed businesses. We work with the Colorado Legislature, Colorado Department of Agriculture, Colorado Seed Growers Association, and Colorado State University in representing the voice of the Seed Industry in issues that affect you and your enterprise. We also provide educational opportunities and serve as a source of information and feedback to our members. An Annual Meeting is held each year which provides a forum for making new acquaintances, renewing friendships, establishing business relationships, developing trade opportunities and discussing issues affecting all involved in the Seed Industry.

We are the only recognized organization in the state of Colorado that represents the entire Seed Industry. We can better represent that assembly if we have input from its many participants. Join us and add to the base of professional seedsmen who are making a difference and defining the future of the Colorado Seed Industry. Help us keep the voice of the Seed Industry strong!

Carrie Mullen, CSIA Secretary
970-356-7002

FORTIFY SF HARD RED WINTER WHEAT -

Released in 2019, Fortify SF was the first Colorado-bred semi-solid wheat to combat the wheat stem sawfly. This pest has been devastating to wheat production for decades, cutting production by nearly 50% in some cases. Fortify SF provides an increase in pith within the stem, which slows the feeding and internal migration of the wheat stem sawfly larvae to the crown of the plant where it girdles the stem before harvest. Other supporting attributes include a medium-early Colorado maturity, improved test weight over Byrd, and wheat curl mite resistance. Its yield performance is greatly improved over Montana semi-solid varieties grown in the high plains. **PVP protected; to be sold by variety name only as a class of certified seed.**

GABRIEL HARD RED WINTER WHEAT -

Released in 2025, Gabriel is the first commercial variety to deliver the use of wsm3 and cmc4; a gene combination providing the most robust resistance to the wheat mosaic virus complex (WSMV + TrimV + HPMV). Gabriel has yielded as good or better than Canvas in most geographies tested, with very good straw strength for irrigation and high rainfall zones, good test weight and protein, and functional end use quality. This variety has a medium long coleoptile with acid soil tolerance, medium plant height and harvest maturity. **PVP protected; SINGLE SEASON USE, no saved seed allowed until harvest 2030.**

GUARDIAN HARD RED WINTER WHEAT -

Released in 2019, Guardian is a great defensive choice combining the cmc4 gene (curl-mite resistance) and the wsm2 gene (WSMV resistance) to help against wheat streak risk. Guardian also provides good resistance to stripe rust and stem rust for wet years. This strong disease package, combined with stable grain yield, exceptional test weight, and a strong grain protein deviation, provide a valuable seed product that will help maximize ROI year after year. **PVP protected; to be sold by variety name only as a class of certified seed.**

HOYT SF HARD RED WINTER WHEAT -

Released in 2025, Hoyt SF is an improved variety to combat sawfly pressure and virus infections in the arid high plains. Solidness hovers around 14 to 15, providing enough harvest protection in mild to moderate infestations, and native triticum resistance to help guard against neighboring curl-mite populations. This variety has good test weight, but below average protein performance; under-fertilized fields will likely see lower proteins. Plant where mild to moderate sawfly and curl-mite risk is present. If sawfly pressure is high, consider blending with Amplify SF. **PVP protected; SINGLE SEASON USE, no saved seed allowed until harvest 2030**

KIVARI AX HARD RED WINTER WHEAT -

Released in 2020, Kivari AX is a medium early addition to the PlainsGold lineup of grassy weed fighting varieties. Kivari AX offers improved grain yield with very good spring frost tolerance and excellent drought and heat tolerance. It has good test weight, very good tolerance to aluminum toxicity and lower pH soils. Fall to Spring biomass production is good for those wanting to graze and harvest for grain production. Timing of first hollow stem is earlier than similar varieties, manage cows and nutrition accordingly if grain harvest is desired. Straw strength is fair in higher rainfall zones, if yields are expected above 80 bushels, utilize a plant growth regulator to keep upright. **PVP protected SINGLE SEASON USE, no saved seed allowed. Stewardship Agreement Required.**

KS HOMESTEADER CL PLUS HARD RED WINTER WHEAT -

KS Homesteader CL+ is a medium-late, medium-tall variety from Kansas State University and Kansas Wheat Alliance. It has a strong disease package with resistance to stripe rust and higher temperature resistance (21C) to WSMV. This variety puts on a heathy amount of straw making it a good choice for producers looking for ground cover before and after harvest. Along with above average straw strength, and good winter hardiness, this wheat also produces good milling and baking results and is a standout with excellent test weight and protein. Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only As A Class Of Certified Seed - U.S. Protected Variety. - 1994 PVPA.

KS PROVIDENCE HARD RED WINTER WHEAT -

KS Providence is a medium to medium-early maturing hard red winter wheat developed by the Kansas Agricultural Experiment Station and owned by the Kansas State University Research Foundation. It is a high yielding wheat with acceptable milling and baking properties. KS Providence is resistant to current races of leaf rust and intermediate to stripe rust in Kansas. It is susceptible to Hessian fly but resistant to soil borne mosaic virus. Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only As A Class Of Certified Seed - U.S. Protected Variety. - 1994 PVPA.

LANGIN HARD RED WINTER WHEAT -

Released in 2016, Langin is an early maturing, medium-short variety with excellent yield potential and excellent baking quality. Stripe rust resistance and acid soil tolerance are very good, winterhardiness and SBMV are excellent. Langin has shown strong adaptation across the High Plains. Straw strength is marginal for high yield environments.

LCS JULEP HARD RED WINTER WHEAT -

LCS Julep is a newer release from Limagrain Cereal seeds. This variety comes from the LCS Mint pedigree, and acts very similar with added benefits. Released in 2019, this variety is a true medium with excellent end-use quality. LCS Julep's straw strength, quick emergence, and drought tolerance package are its main assets. It has a very high tiller count and late spring green up which has allowed this variety to handle late freezes very well. LCS Julep is a nice step up from an already great variety in LCS Mint. Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only As A Class Of Certified Seed - U.S. Protected Variety - 1994 PVPA.

LCS RUNNER HARD RED WINTER WHEAT -

LCS Runner from Limagrain Cereal Seeds: This variety can really run away from the competition thanks to its very good overall disease package, broad adaptability, and its excellent yield potential. It is a LCS Mint pedigree with improved Fusarium Head Blight tolerance, better standability, and slightly earlier in maturity. LCS Runner still carries the great quality that LCS Mint is known for. In research trials LCS Runner beat LCS Mint by an average of 4 bushels to the acre. This variety handles acid soil well and has excellent drought tolerance. This is one variety you will want to run towards for your farm. Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only As A Class Of Certified Seed - U.S. Protected Variety - 1994 PVPA.

OUTLAW HARD RED WINTER WHEAT -

Released in 2025, Outlaw is the next generation of a medium early racehorse similar to Langin with improved straw strength, better stripe rust tolerance, and improved virus resistance via cmc4 and its native tolerance to triticum mosaic. Outlaw has consistently outperformed Langin in yield, test weight, and protein accumulation. This variety is very drought tolerant and finishes well in the heat, but due to its shorter stature, post-harvest biomass to cover ground in dry years will be less compared to other varieties. **PVP protected; to be sold by variety name only as a class of certified seed.**

RAY HARD RED WINTER WHEAT -

A true Dual Purpose hard red winter wheat that is winter hardy, late maturing, tall, awnless, and a delicious option for livestock feed. Compared to Willow Creek, Ray has similar forage yield and quality with a higher leaf-to-stem ratio, and superior grain yield. Compared to bread wheats, Ray has average to above average yield, good test weight and protein, very low PPO, and good milling and baking characteristics. A good option for grazing, hay, and haylage or harvesting for grain. Licensed by CWRF from Montana Agricultural Experiment Station. **PVP protected; to be sold by variety name only as a class of certified seed.**

SHERIDAN HARD RED WINTER WHEAT -

Released in 2024, Sheridan provides unique characteristics as a hard red winter wheat to improve resilience at planting and throughout the season. Sheridan is drought tolerant and has a longer coleoptile, optimizing performance at deeper planting depths to ensure sprout and emergence in dry fall conditions. This variety has demonstrated encouraging improvements with stripe rust resistance, given an industry rating of Very Good. Knowing stressful conditions can derail quality, Sheridan has a stronger protein deviation, meaning it assimilates Nitrogen and Sulfur from soil and leaves into grain more effectively, improving consistency of grain protein. Sheridan is currently being tested broadly to better understand its area of adaptation in the central and northern plains. **PVP Protected; to be sold by variety name only as a class of Certified Seed.**

STEAMBOAT HARD RED WINTER WHEAT -

Steamboat hard red winter wheat was released by Colorado State University (CSU) in 2020. The parentage is half Byrd, one-quarter Antero and one-quarter TAM114. Steamboat is an awned, white-chaffed, medium maturing variety with tall plant height, a medium-long coleoptile, average straw strength, and very good test weight. Steamboat has very good resistance to stripe, leaf, and stem rust, and a very good reaction to wheat streak mosaic virus due to carrying the wheat curl mite gene from the Byrd parent. It has very good milling and baking quality, and average grain protein deviation. Steamboat is marketed by the Crop Research Foundation of Wyoming. Unauthorized Propagation Prohibited – To Be Sold by Variety Name Only as a Class of Certified Seed – U.S. Protected Variety – 1994 PVPA.

SY TF 813 TRITICALE-

SY TF 813 is a tall semi-dwarf cultivar of winter triticale which is shorter statured than 348 triticale. It matures earlier and is more productive than 348 but somewhat later than TAMCALE 5019. Grain yields of SY TF 813 have been substantially higher than the silage variety 348 and significantly greater than the forage cultivar TAMCALE 5019. SY TF 813 is well suited for multiple uses. Its vegetative biomass production in the fall is superior to 348 and TAMCALE 5019 and silage harvests also have been equal to or greater than check cultivars. SY TF 813 is uniformly awnletted which is preferred for hay and silage over fully awned cultivars. SY TF 813 generally produces silage with higher crude protein and higher relative feed value than either 348 or TAMCALE 5019. SY TF 813 is sufficiently winter hardy to withstand the cold temperatures characteristic of the Texas Panhandle and western Kansas. Unauthorized Propagation Prohibited – To Be Sold By Variety Name Only As A Class Of Certified Seed – U.S. Protected Variety – 1994 PVPA.

APPROVED CERTIFIED SEED CONDITIONERS

The Approved Conditioner Program in Colorado is designed to fill the need for efficient cleaning and distribution of Colorado Certified Seed. Approved seed conditioners are regular members of the Colorado Seed Growers Association and provide quality assurance for the seed producer and the seed customer. An approved conditioner is not only responsible for cleaning certified seed, but also serves as a connection between the seed producer and the seed trade. Approved conditioners include: 1) firms that are authorized to purchase field-approved seed and move it into their plants for conditioning, submit samples for laboratory analysis, order tags, labels or bulk sales certificates, and merchandise the finished product, and 2) firms that provide seed cleaning and handling services which prepare the certifiable seed to be marketed by its grower. According to CSGA standards, all certifiable hard red winter wheat must be cleaned by an approved conditioner that has secondary equipment capable of removing jointed goatgrass. Such conditioners are noted with *. The following list does not include seed producers approved to condition only their own seed.
